## Web

Tip: Try removing quotes from your search to get more results.

Your search - +"~relationship ~algebra" +"~comparing ~models" - did not match any documents.

## Suggestions:

- Make sure all words are spelled correctly.
- Try different keywords.
- Try more general keywords.
- Try fewer keywords.

Also, you can try Google Answers for expert help with your search.

1 An algebraic language for graphical query formulation using an extended entityrelationship model

Bogdan Czejdo, Ramez Elmasri, Marek Rusinkiewicz, David W. Embley February 1987 Proceedings of the 15th annual conference on Computer Science

Full text available: pcf(847.36 KB) Additional Information: full citation, abstract, references, citings, index terms

The Entity-Category-Relationship (ECR) model extends the Entity-Relationship (ER) model with the concepts of subclass and generalization categories. In this paper a graphical representation of the ECR model and its application as the basis for an interactive query language are discussed. The proposed query language is based on algebraic operators that can be used to transform an ECR diagram so that it represents a desired query. Semantics of the algebraic operators are formally defined. A m ...

2 Towards a semantic view of an extended entity-relationship model. Martin Gogolla, Uwe Hohenstein

September 1991 ACM Transactions on Database Systems (TODS), Volume 16 Issue 3

Full text available: Total scale (3.09 MB)

Additional Information: full citation, abstract, references, citings, index terms, review

Nearly all query languages discussed recently for the Entity-Relationship (ER) model do not possess a formal semantics. Languages are often defined by means of examples only. The reason for this phenomenon is the essential gap between features of query languages and theoretical foundations like algebras and calculi. Known languages offer arithmetic capabilities and allow for aggregates, but algebras and calculi defined for ER models do not. This paper introduces an extended ER m ...

Keywords: abstract data type, aggregate function, calculus, entity-relationship model, formal semantics, relational completeness, safeness, semantic data model

+"~relationship ~algebra" +~statistical

## Nothing Found

Your search for +"~relationship ~algebra" +~statistical did not return any results.

You may want to try an Advanced Search for additional options.

Please review the Quick Tips below or for more information see the Search Tips.

## **Quick Tips**

• Enter your search terms in lower case with a space between the terms.

sales offices

You can also enter a full question or concept in plain language.

Where are the sales offices?

 Capitalize <u>proper nouns</u> to search for specific people, places, or products.

John Colter, Netscape Navigator

• Enclose a <u>phrase</u> in double quotes to search for that exact phrase.

"museum of natural history" "museum of modern art"

Narrow your searches by using a + if a search term <u>must appear</u> on a page.

museum +art

Exclude pages by using a - if a search term <u>must not appear</u> on a page.

museum -Paris

Combine these techniques to create a specific search query. The better your description of the information you want, the more relevant your results will be.

museum +"natural history" dinosaur -Chicago
